Detailed Evaluation of Ecosystem Processes (DEEP) Field Worksheet

Mink Brook & tributaries | NE Highlands L3 v3 | Final

Menichino, G. and others (2026). A curve-based detailed assessment for the Northeastern Highlands, built from the NRSA least-disturbed reference pool <L3> with L2 borrowing where the pool was thin.

Reach ID: NHDPlusID 10000100012345 **Reach Length:** 1,000 ft **Date:** _____ **Assessor(s):** _____ **Coordinates:** 43.68580, -72.23670

Site: Mink Brook | drainage area 12.4 km2 | STAF site engine (HR reach watershed)

RECORDING INSTRUCTIONS

Bankfull width is read where the active channel's scour line meets the floodplain; record it in feet to one decimal at three riffles & average them. Where the banks are undercut, measure from the lip, not the toe, and note it. Bankfull width is read where the active channel's scour line meets the floodplain; record it in feet to one decimal at three riffles & average them. Where the banks are undercut, measure from the lip, not the toe, and note it. Bankfull width is read where the active channel's scour line meets the floodplain; record it in feet to one decimal at three riffles & average them. Where the banks are undercut, measure from the lip, not the toe, and note it.
